UNIFORM CRIME REPORTS

J. Edgar Hoover, Director, Federal Bureau of Investigation, U. S. Department of Justice, Washington, D. C.

Volume XIX

July 1948

Number 1

SUMMARY

Crime Trends, January-June, 1948

While urban crime declined 1.8 percent during the first 6 months of 1948, the trend in the rural areas was upward, increasing 3.8 percent compared with the first half of 1947.

For one of the few times in 18 years offenses of rape showed a decrease—0.4 percent in the urban places and 9.3 percent in the rural areas. Aggravated assaults rose 4.0 percent in the cities but only 0.2 percent in the rural communities, and larcenies, which were up only 0.6 percent in the urban areas, increased 8.9 percent in the rural sections.

Urban murders declined 2.3 percent during the first half of 1948, while murders in the rural areas rose 1.7 percent. Similarly, burglaries in the urban communities declined 1.9 percent while in the rural areas these offenses showed an increase of 5.3 percent.

Other crimes showed decreases in both the urban and rural areas as follows: Negligent manslaughter, urban 5.7 percent and rural 4.8 percent; robbery, urban 5.6 percent and rural 7.5 percent; and auto theft, urban 12.7 percent and rural 7.6 percent.

Value of Property Stolen

Hold-up men took an average of \$218 per robbery during the first 6 months in 1948, while the loot in the average burglary was \$125; in the average larceny \$62; and the average car stolen was valued at \$848. The police recovered 93.8 percent of the stolen cars and 21.5 percent of other stolen property.

Persons Arrested, January-June, 1948

Of the 377,933 fingerprint arrest records received at the FBI during the first half of 1948, ages 21, 22, 23, 19, and 20 predominated in that order. Ten percent (37,803) were females.

Offenses Cleared by Arrest, 1947

The police in 1947 arrested the offender in 800 of each 1,000 crimes against persons and in 256 of each 1,000 offenses against property.

For individual crime classes the percentage cleared by arrest was: Murder, 88.1; negligent manslaughter, 85.5; rape, 76.5; aggravated assault, 79.6; robbery, 41.1; burglary, 29.2; larceny, 22.4; and auto theft, 29.2. In each category except murder the clearance rate improved somewhat over 1946.

Persons Found Guilty, 1947

Over 79 percent of all persons formally charged by the police in 1947 were found guilty by the courts, with the percentage guilty ranging from 39.4 for negligent manslaughter to 89.0 for driving while intoxicated. Following the investigation of an average group of 1,000 major crimes reported to the police in 1947, ultimately 140 persons were convicted in court.

Police Employees Killed, 1947

Sixty-seven city police employees were killed in line of duty during 1947 for a fatality rate of 4.59 per 5,000,000 inhabitants; a much improved figure over the 5.64 for 1946, but not as good as the 4.06 recorded for 1945.

Number of Police Employees, April 30, 1948

As of April 30, 1948, police departments in 3,225 urban communities reported a total of 133,361 employees, or 1.83 for each 1,000 inhabitants. The figures ranged from 1.29 in cities with less than 10,000 inhabitants to 2.33 in cities over 250,000.

CLASSIFICATION OF OFFENSES

The term "offenses known to the police" is designed to include those crimes designated as part I classes of the uniform classification occurring within the police jurisdiction, whether they become known to the police through reports of police officers, of citizens, of prosecuting or court officials, or otherwise. They are confined to the following group of seven classes of grave offenses, shown by experience to be those most generally and completely reported to the police: Criminal homicide, including (a) murder, nonnegligent manslaughter, and (b) manslaughter by negligence; rape; robbery; aggravated assault; burglary—breaking or entering; larceny—theft; and auto theft. The figures contained herein include also the number of attempted crimes of the designated classes. In other words, an attempted burglary or robbery, for example, is reported in the bulletin in the same manner as if the crime had been completed. Attempted murders, however, are reported as aggravated assaults.

"Offenses known to the police" include, therefore, all of the above offenses, including attempts, which are reported by the law-enforcement agencies of contributing communities and not merely arrests or cleared cases. Offenses committed by juveniles are included in the

same manner as those known to have been committed by adults, regardless of the prosecutive action. Complaints which upon investigation are learned to be groundless are not included in the tabulations which follow.

In publishing the data sent in by chiefs of police in different cities, the FBI does not vouch for their accuracy. They are given out as current information which may throw some light on problems of crime and criminal-law enforcement.

In compiling the tables, returns which were apparently incomplete or otherwise defective were excluded.

In the last section of this bulletin may be found brief definitions of part I and II offense classifications.

MONTHLY REPORTS

Offenses Known to the Police—Cities Divided According to Population

The number of offenses together with the rate per 100,000 inhabitants as reported by city police during the first 6 months of 1948 is presented in table 1. The data are divided into 6 groups of cities according to size to make possible a comparison of crime rates in a local community with national averages for cities of comparable population. The figures of 2,279 cities representing 67,179,008 inhabitants are included.

The crime rates in table 1 may be compared generally with those in a similar tabulation for January–June 1947 (vol. XVIII, No. 1). Such a comparison reflects only a few increases, most of which are in the large cities. Cities over 250,000 in population showed increases in each offense class except robbery and auto theft, while cities from 100,000 to 250,000 had increases in murder, rape, aggravated assault and larceny. The 50,000 to 100,000 group showed higher rates the first half of 1948 for negligent manslaughter, rape, and burglary. In the smaller communities the only increases noted were for rape in cities with population from 25,000 to 50,000 and for larceny in cities under 10,000.

Crime rates for cities grouped by location may be found in tables 4 and 5.

 $^{^{\}rm I}$ The number of offenses and rate for burglary and lareeny-theft are based on reports as follows: Group I, 34 cities, total population, 20,507,837; groups I–VI, 2,277 cities, total population, 57,792,679.

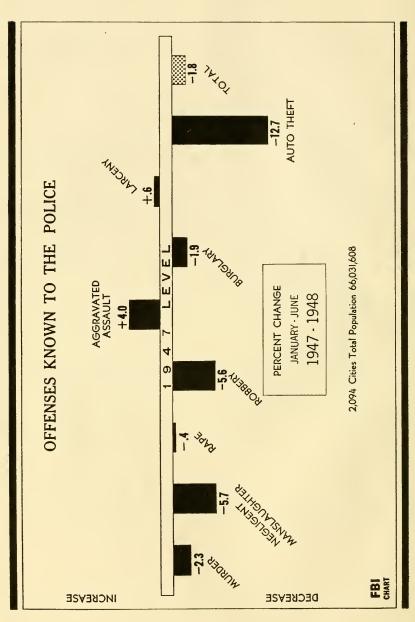

FIGURE 1.

Annual Trends, Offenses Known to the Police in Urban Communities

Urban crime the first half of 1948 declined 1.8 percent from the relatively high figures for the first six months of 1947, based on the reports of the police in over 2,000 cities representing 88 percent of the Nation's urban population.

While aggravated assault increased 4.0 percent and larceny, 0.6 percent, decreases were recorded for all other offense classes. The decline in rape, while only 0.4 percent, is significant since it is one of only a few interruptions observed in a steady increase in such crimes over many years.

The largest decline was registered for auto thefts, 12.7 percent, and other decreases were as follows: Murder, 2.3 percent; negligent manslaughter, 5.7 percent; robbery, 5.6 percent; and burglary, 1.9 percent.

Offenses Known to the Police—Cities Divided According to Location

The amount of crime per unit of population is found to vary considerably among the several States and geographic divisions as would be expected since the volume of crime depends upon many factors, some of which are listed on the page immediately preceding table 6 of this bulletin. Because of these understandable differences in crime rates the data shown in table 1 have been subdivided according to location as shown in tables 4 and 5 below.

In examining the crime rates for individual States and geographic divisions, it should be remembered that in the interest of uniformity the 1940 decennial census population figures were used in preparing the data, and in some sections of the country marked changes in the population of many communities have occurred since 1940.

The information presented in tables 1, 4, and 5 is supplemented by the data in table 3 which indicates the number of cities used in preparing the tabulations.

Offenses in Individual Cities With More Than 100,000 Inhabitants

The number of offenses reported as having been committed during the period of January–June 1948 is shown in table 6. The compilation includes the reports received from police departments in cities with more than 100,000 inhabitants. Police administrators and other interested individuals will probably find it desirable to compare the crime rates of their cities with the average rates shown in tables 1 and 5 of this publication. Similarly, they will doubtless desire to make comparisons with the figures for their communities for prior periods, in order to determine whether there has been an increase or a decrease in the amount of crime committed.

Caution should be exercised in comparing crime data for individual cities, because differences in the figures may be due to a variety of factors. The amount of crime committed in a community is not solely chargeable to the police but is rather a charge against the entire community. The following is a list of some of the factors which might affect the amount of crime in a community:

Population of the city and metropolitan area adjacent thereto.

The composition of the population with reference particularly to age, sex, and race.

The economic status and activities of the population.

Climate.

Educational, recreational, and religious facilities.

The number of police employees per unit of population.

The standards governing appointments to the police force.

The policies of the prosecuting officials and the courts.

The attitude of the public toward law-enforcement problems.

The degree of efficiency of the local law-enforcement agency.

It should be remembered that the war brought about marked changes in some of the foregoing factors in many communities.

In comparing crime rates, it is generally more important to determine whether the figures for a given community show increases or decreases in the amount of crime committed than to ascertain whether the figures are above or below those of some other community.

² Figures include offenses committed by juveniles; this is in accord with the uniform reporting procedure followed by other cities.

Supplement to Return A Data

The monthly return A form prepared by all contributors provides basic information on the number of crimes occurring for each of the Part I crime classes. Police in cities of 25,000 and over population also forward the Supplement to Return A each month. This form furnishes details concerning specific types of criminal activity within the main crime classes and also reflects the value of property stolen and the value of stolen property recovered by the police. With the exception of the rape classification, the supplement form deals with crimes against property.

Young girls were victims in at least 1,254 crimes of rape during January—June 1948 in the 355 reporting cities represented in table 7. Thus, 44 percent of the 2,848 offenses of rape were statutory in nature (no force used—victim under age of consent). The balance, 1,594, (56 percent) represent forcible criminal assaults.

Victims were assaulted by force, weapons or threats in the 15,680 robberies reported by these cities and almost 64 percent (9,953) of these hold-ups and strong-arm robberies occurred on sidewalks, streets, and other public highways. Business houses, including oil stations, chain stores, and banks were the victims of 4,332 (almost 28 percent) of the robberies.

Of the 90,214 burglaries in these cities, 73,528 (81.5 percent) occurred at night. Since business and other nonresidence places generally are occupied during the day they were victimized in only 34.8 percent of the 16,686 daylight burglaries. Residence burglaries represent only 37.6 percent (33,926) of the total burglaries while the balance, 62.4 percent (56,288), were those of stores and other nonresidence structures.

Of the 202,140 larcenies, 7,340 were thefts from the person involving pocket-picking and purse-snatching. While numerically small as compared to the total larceny figure, these thefts fall short of the robbery classification only because of the lack of the element of force.

Thefts of accessories and other articles from automobiles occurred in 68,932 instances or 34.1 percent of the thefts. Over 29,000 bicycles were stolen and although these represented less than 15 percent of the thefts, such crimes present a major problem to the police.

The police may further analyze the theft problem by value of property stolen. Almost 25 percent of the 202,140 thefts involved property valued at \$50 and over, and over 61 percent (124,432) of the thefts involved property valued at \$5 to \$50 while the property stolen was valued at less than \$5 in only 14 percent of the cases.

During the first 6 months of this year, 38,427 automobiles were stolen in the cities represented in table 7 and the police recovered 36,032 or 93.8 percent.

The value of property stolen, by type of crime, is shown in table 8 and the value of property stolen and property recovered, by type of property, is reflected in table 9. Complete data were not included in the reports of all 355 cities represented in table 7. However, table 8 includes information for 346 of these cities while table 9 covers 339 of the cities.

Table 7.—Number of known offenses by nature of criminal act, time and place of commission, and value of property stolen, January-June 1948

[Based on reports of 355 cities over 25,000 in population; total population, 40,619,453, according to 1940 decennial census]

The \$57,851,005 in loot reported in table 8 for 346 cities with a combined population of 39,298,213 represents an average of \$1.47 per citizen for the first 6 months of 1948. However, the 15,299 persons who were confronted with a robber's gun or subjected to other force or threats each lost \$218 on the average or a total of \$3,336,266. During the same 6 months \$10,918,647 was obtained by burglars in 87,677 places or an average loss of \$125 per offense.

Though some thefts are not considered of major importance, their very number accounted for a loss of \$12,184,053 or \$62 per theft on the average. Automobiles valued at \$31,412,039 were stolen during the period under study in the 346 cities. This represents an average value of \$848 for each of the 37,053 cars stolen.

The average value of property stolen per offense as shown in table 8 is conservative, since attempted crimes are counted as though the crime were completed, except that no property value is listed.

Police recovered property valued at \$32,874,544 or 60.4 percent of the \$54,385,043 total stolen during January–June 1948 in 339 cities with population over 25,000. Stolen money, jewelry, furs, and other personal property except automobiles totalled \$25,009,313 and \$5,383,809 of this property was recovered. This represents a recovery percentage of 21.5.

Table 8.—Value of property stolen, by type of crime, January-June 1948

[Based on reports of 346 cities over 25,000 in population; total population, 39,298,213, according to the 1940 decennial census. All values have been rounded off to even dollars]

Rural Crime Rates

The number of offenses as reported by 1,681 sheriffs, 127 rural village officers, and 11 State police agencies is presented in table 10, together with the rate per 100,000 inhabitants. The rural population represented in the reporting area is 36,628,387.

The rural rates for crimes against property are generally lower than the corresponding urban rates, and in this connection it should be observed that some incompleteness exists in the rural reporting. Some of the reports used in table 10 were probably based on arrest records rather than on a record of offenses reported. Since a comparatively small proportion of crimes against property are followed by arrest the figures should be considered conservative.

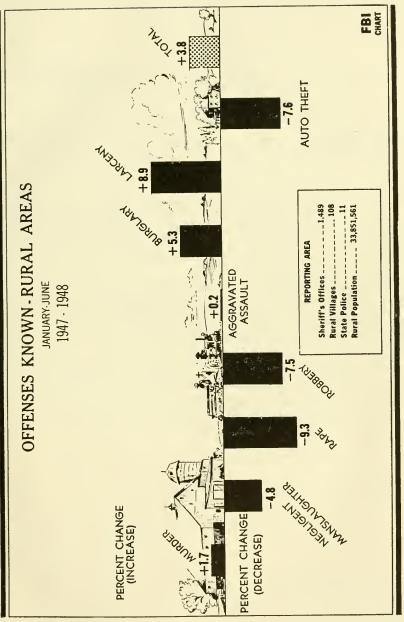

FIGURE 2

Rural Crime Trends

While urban crime was down somewhat during the first half of 1948, the trend in the rural areas continued upward with the total 3.8 percent over that for January–June of 1947, according to reports received during both periods from 1,608 police agencies serving a rural population of 33,851,561.

In burglaries and larcenies, which comprise well over two-thirds of the rural crime, the increases were fairly substantial—5.3 percent for burglary, and 8.9 percent for larceny—while in the cities burglaries declined 1.9 percent and larcenies rose 0.6 percent.

Rural murders increased 1.7 percent as compared with a 2.3 percent drop in urban communities but the rural increase in aggravated assault of only 0.2 percent was much less than the 4.0 percent rise in the cities. Other offenses declined in both urban and rural areas with the rural figures off as follows: Negligent manslaughter, 4.8 percent; rape, 9.3 percent; robbery, 7.5 percent; and auto theft, 7.6 percent.

POLICE EMPLOYEE DATA

Police Killed, 1947

Sixty-seven more police employees lost their lives during the performance of official duties during 1947, bringing the postwar toll in urban communities to 208 (82 in 1946 and 59 in 1945).

The number of police employees killed during 1947 by geographic divisions and size of city is presented in table 13 together with the rate per 5 million inhabitants.

There were 4.59 police employees killed per 5 million inhabitants for all cities as a group. For individual city groups, those with from 10,000 to 25,000 inhabitants had the highest rate, 5.59, with the low of 3.40 registered in the city group with 50,000 to 100,000 population. The rates ranged from 1.56 in the New England States to 8.49 in the Mountain States. The Mountain States enjoyed the low position in 1946.

The figures in table 12 indicate the number of cities included in the study of police employees presented in the other tabulations which follow. It will be noted that 98 percent of the urban population is represented in the survey and this was also true for the two previous years.

Number of Police Employees, April 30, 1948

On April 30, 1948, police departments in 3,225 cities reported a total personnel of 133,361, including 9,676 civilians without police power and 123,685 police officers.

The ratio of all police personnel, including civilians, to population is 1.83 employees for each 1,000 inhabitants. It is noted that the larger the city the greater the number of police personnel by unit of population, with cities over 250,000 reporting 2.33 police employees per 1,000 population while places under 10,000 listed 1.29. However, there was an increase in each city group in terms of the number of police per 1,000 inhabitants as compared with 1947. Last year the over-all average was 1.75 police compared with 1.83 this year.

Table 14 presents the number of police employees and rate per 1,000 inhabitants by geographic divisions and population groups. The increase in police personnel is demonstrated in the decrease in number of inhabitants per police employee, as of April 30, as follows:

Number of inhabitants per police employee

	1947	1948
Total, all cities	572	548
Group I (over 250,000). Group II (100,000-250,000). Group III (50,000-100,000). Group IV (25,000-50,000). Group V (10,000-25,000). Group V (10,000-25,000).	448 620 628 698 758 827	429 597 606 667 729 777

While the foregoing shows there was on April 30, 1948, one police employee for every 548 persons living in urban areas, in considering available police protection it must be remembered that police business continues around the clock each day of the week with the men working in shifts. In addition the effective strength of a department is reduced because of days off each week, vacations, injuries, etc. Also, a substantial number of employees are necessarily on administrative and other inside assignments regularly. Considering such factors, one police officer on the average is probably responsible for the protection of the lives and property of nearer 2,000 persons than 548 as the foregoing tabulation indicates.

The number of police employees per 1,000 inhabitants for the 7-year period 1942–48 is shown below. The figures are limited to cities having over 25,000 inhabitants, since the data were not collected from smaller communities from 1942 through 1945. The following figures are for April 30 of each year:

1942	1. 83	1944	1. 73	1946	1. 86	1948	2. 02
1943	1. 77	1945	1. 68	1947	1. 94

FIGURE 3

Police Employees in Individual Cities

The number of police employees as of April 30, 1948, for individual cities may be obtained by reference to tables 15 and 16. Reporting cities are arranged by size and listed alphabetically by State. For cities over 25,000 in population the employees are separated as to civilians and police officers.

Although the number of civilian employees is not shown in the individual figures for cities under 25,000, they are included in the tabulation below which reflects the percentage of civilian employees for each population group. Generally, the larger communities reported the greater proportion of civilians to the total police employees as shown in the following:

Population group:	Percen civilian employees
Total all cities	7. 3
Group I	8. 3
Group II	9. 6
Group III	
Group IV	
Group VI	

The report form forwarded by the police as of April 30, 1948, provided for a separate listing of full-time and part-time employees and, further, a designation of the number in each class who were police officers and those who were civilians. The form was also designed to include a statement of the equivalent number of full-time employees represented by the work of the part-time employees in April. If the department's entries relative to part-time employees were limited to the total time worked during April the FBI changed the data into terms of full-time employees. For this purpose it was assumed that 200 hours was the approximate time of a regular employee. In the event a part-time employee worked at least 75 percent of the normal working hours for the month, one full-time employee was counted.

If employees were not paid from police department funds or from some public fund allocated for police personnel, they were excluded from the tabulations. Also employees on military or other extended leave of absence were excluded from the figures.

Comparisons of police strength between cities represented in tables 15 and 16 cannot be used indiscriminately. There are many complex factors entering into the question of adequacy or inadequacy of the number of personnel in a particular police department. One of the primary considerations in such a study should be the volume of police

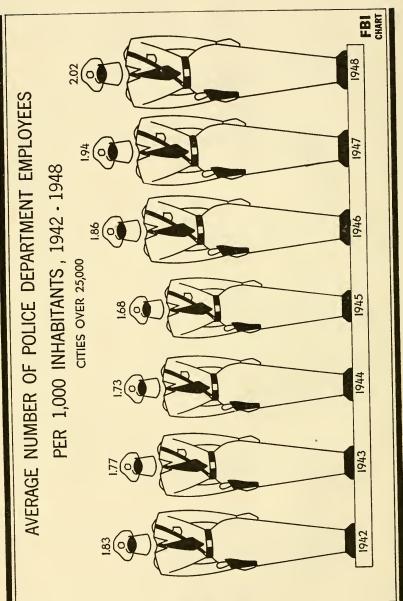

FIGURE 4.

business handled. The amount of work confronting police departments cannot be measured by reference to major crimes alone. For example, in some cities the police expend a great deal of time in escort work, investigations of all sorts of license applications, taking the city census, and the like. Conversely, in other cities such activities are not performed by the police.

In addition, some departments may have a 40-hour week while others work 60 hours or longer. In most departments the three-shifts per day method of operation is common, but some still may retain the 12-hour day. Differences in automotive and communication equipment affect comparisons of departments as do the number of private police and separate police organizations such as public park police.

In some instances volunteer workers may assist the police in certain phases of their activities. The problem of handling traffic at school crossings is also important. Full-time police officers may be assigned to this work or the department may utilize part-time guards who are classed as civilian employees in these tabulations unless it was specifically stated that they had police powers.

Other factors which must be considered in an intelligent study of police strength as between cities are suggested in the text preceding table 6.

It should be particularly noted that in grouping the cities, and, in fact, in all tabulations, the 1940 census figures were used in the interests of uniformity. Since 1940, however, marked changes in population occurred in many communities; a number in the Pacific area, for example, more than doubled in size.

ANNUAL REPORTS

Offenses Cleared by Arrest, 1947

Eighty of every 100 crimes against the person were cleared by the police in 1947, and for each 100 crimes against property, almost 26 were cleared by arrest. Intensified investigation of the comparatively more serious crimes, those involving personal assault, a prompt reporting of such crimes and the availability of a description of the assailant are doubtless major factors affecting the clearance rate for crimes against the person. In the individual classifications of crimes against the person, the police in 1947 cleared by arrest 88.1 percent of the murders, 85.5 percent of the negligent manslaughters, 76.5 percent of the rapes, and 79.6 percent of the aggravated assaults.

In crimes with property as the object in 1947 the police cleared by arrest 41.1 percent of the robberies, 29.2 percent of the burglaries, 22.4 percent of the larcenies, and 29.2 percent of the auto thefts. Although a robbery is considered as a crime against property, it does involve an assault on the victim or threats of bodily harm and its similarity to a crime against the person is thus reflected in the relatively higher clearance rate in comparison with other crimes against property.

Property crimes comprised 94.4 percent of the offenses investigated in the reporting cities and 194,856 of these were cleared by arrest as contrasted with 36,265 clearances of crimes against the person.

"Cleared by arrest" means generally that one or more offenders in the case have been arrested and made available for prosecution. Several offenses may be cleared by the arrest of one individual if the police investigation establishes evidence identifying that person as the perpetrator of the offenses. However, if several people were arrested who jointly committed only one crime, the police would score only one offense as cleared by arrest. The police may in some instances "close" an investigative case when the offender has been definitely identified and located, but not formally arrested and charged in the local jurisdiction for reasons beyond the control of the police. practical matter the police would consider such a case cleared and provision for these "exceptional clearances" is included in the system of uniform crime reporting. These "exceptional clearances" are comparatively few in number and are strictly limited under the instructions in the Uniform Crime Reporting Handbook, distributed by the FBI to contributing agencies.

A case is not cleared by arrest merely because stolen property is recovered. However, as an offset to the low arrest clearance of prop-

erty crimes and as an indication of police activity, it may be noted that 60.3 percent of property stolen in 1947 was recovered by the police.

The number of offenses cleared by arrest and the number of persons charged for each 100 offenses known to the police in 1,639 cities having a combined population of 49,236,928 are presented in table 17. The number of offenses cleared by arrest does not agree with the number of persons charged since the arrest of one individual may clear several crimes but only one person would be charged. Likewise, several persons may be charged for the commission of only one offense. Certain crime classifications will show more persons charged than there are offenses cleared by arrest. This will be observed particularly in the negligent manslaughter classification. It is the practice in some jurisdictions to arrest and charge surviving drivers involved in fatal automobile accidents even though they are released upon completion of the police investigation if it is established they were not operating the vehicle in a grossly negligent manner.

Questionnaires are used in conjunction with the annual reports to insure uniformity in the figures compiled by the various contributing agencies. No reports are included in the tabulations unless the agency indicated that all offenses of the indicated types known to have occurred were included. Also these departments indicated that the figures pertaining to offenses cleared by arrest were properly distinguished from those relating to the number of persons arrested

by the police.

Each report is carefully reviewed as to reasonableness of the figures and any apparent discrepancy or possible misunderstanding is made the subject of correspondence as a further precaution in determining the quality of the figures reported. Letters were sent to 750 of the 1,639 cities used in the following tabulation.

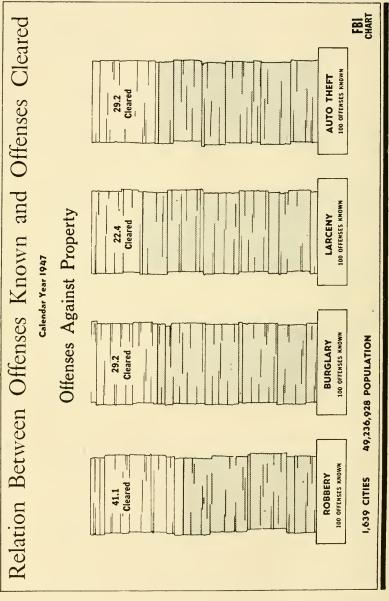

FIGURE 6.

Persons Charged (Held for Prosecution), 1947

Of 2,451,724 persons charged by the reporting police departments in 1947, for violations other than minor traffic infractions, 326,388 or 13.3 percent were charged with serious crimes. The data in table 18 are from 1,639 cities with a combined population of 49,236,928 and the number of persons charged with serious crimes in the individual classifications is as follows:

Murder	2, 838	Stolen property (receiving, etc.)_	4, 554
Manslaughter	1, 799	Forgery and counterfeiting	7, 711
Robbery	11, 347	Rape	4, 931
Aggravated assault	24, 456	Narcotic drug laws	2, 585
Burglary	35, 675	Weapons (carrying, etc.) 1	9, 045
Larceny	78, 207	Offenses against family and	
Auto theft	18, 870	children3	31, 112
Embezzlement and fraud	11, 372	Driving while intoxicated 7	1, 886

With some exceptions, more persons were arrested and charged per unit of population in the larger cities. This coincides with the general observation that the greater the population in a city the more numerous are the crimes which are committed per unit of population. However, the persons charged rates for assault, burglary, larceny, auto theft, buying, receiving and possessing stolen property, forgery and counterfeiting, sex offenses, offenses against family and children, liquor law violations and drunkenness were greater in some small city groups than in the large population centers. The lowest rate for driving while intoxicated was registered in cities of over 250,000 inhabitants while cities under 10,000 had the highest rate in this category.

The scoring of the number of persons charged is governed by different rules from those for scoring offenses known to the police. This distinction should be recognized in studying table 18. For example, an armed robbery of a drug store, a candy store, and a service station by the same robber would count as three separate offenses of robbery known to the police. Upon the arrest of the robber and his identification with the three offenses, he would be charged with robbery but only one person charged would be scored. This distinction between the counting of crimes and counting of persons may be further illustrated by assuming that a grocery store is robbed by three armed bandits. The police would score one offense of robbery. Upon arresting and charging the three bandits, three persons charged with "unauthorized use" which would be listed under "all other offenses."

Almost 96 percent of the 1,639 cities represented in the following tabulations indicated they had correctly listed the number of persons charged rather than the number of charges placed against persons arrested; i. e., if on an occasion of a single arrest an offender was

charged with burglary and larceny, the person was listed as only one person charged, the entry being made opposite burglary.

Over 86 percent of the departments advised that all or some juveniles were included in the reports. Over 81 percent stated that all juveniles were included. Of the departments including juvenile arrests, 97 percent properly included them opposite the classification embracing the violations involved, such as robbery, auto theft, and the like, even though a technical charge such as "juvenile delinquency" was placed against the juvenile at the time of his arrest. The remainder of the departments reported juveniles opposite "all other offenses."

Table 19 includes detailed figures concerning persons charged with (1) violations of road and driving laws (usually distinguished as "moving" violations), (2) parking violations, and (3) other traffic and motor vehicle laws, except driving while intoxicated. The figures are from 1,434 cities and are set forth separately in table 19, since such detail was not furnished by all 1,639 cities represented in table 18.

Offenses Known, Cleared by Arrest, and Persons Charged and Found Guilty, 1947

Of each 1,000 major crimes in 1947, police cleared 278 with the arrest of 185 persons of whom 140 were found guilty (119 guilty as charged and 21 of a lesser offense). Such information is of value to a police administrator measuring the efficiency of his investigators in preparing cases for court.

For each 1,000 crimes against the person in 1947, 767 were cleared by the arrest of 651 persons and 403 of these were found guilty, while the conviction ratio for crimes against property was 125 for each 1,000 offenses. Of the persons formally charged the percentage found guilty ranged from 89.0 for driving while intoxicated to 39.4 for negligent manslaughter. Over 79 percent of all persons charged by the police in 1947 were found guilty, according to the information in tables 20 and 21.

The percentage of persons found guilty decreased in 1947 as compared with 1946. Decreases were sharp in embezzlement and fraud, negligent manslaughter, stolen property, and drunkenness. Increases were noticeable in the robbery, auto theft, offenses against family and children, and narcotic drug laws classes.

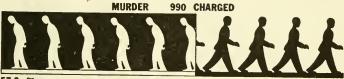

Tables 20 and 21 are based on the reports of 181 cities with more than 25,000 inhabitants representing a combined population of 19,161,801. The reports do not provide for listing offenses known for the part II crimes and accordingly the persons found guilty data are presented separately in the indicated tables. Unless the entries in the reports for persons found guilty represented the final disposition of the charges placed against persons arrested they were excluded from the summaries. Certain classifications were not listed separately in table 21 since separate figures were not provided in some reports used.

Persons Released Without Being Held for Prosecution, 1947

The arrest data in the preceding text and tables have been limited to the number of persons formally charged with a crime. reports forwarded by the police also include the number of persons arrested and released without a formal charge being brought against them. By combining the number of persons charged and those released without being held for prosecution the police have the total number of arrests for violations occurring locally for the year. Arrests for other authorities are not included by the reporting agency to avoid a duplicate listing of such matters.

The figures include persons taken into custody and released with a reprimand or on the "golden rule" principle. Youthful offenders released for various reasons without a formal charge being placed are included as are persons ignoring notices to appear for traffic violations who are not subsequently arrested and charged.

Reports appearing incomplete or incorrect as to persons released were excluded from tables 22 and 23. Accordingly, 1,084 cities with a combined population of 29,637,974 are represented although figures for persons charged were available for 1,639 cities in table 18.

Some cities did not itemize the persons released figures for road and driving laws, parking violations, and other traffic and motor vehicle laws, resulting in a combining of these classes in table 22 and available separate data in table 23.

Offenses Known, Cleared by Arrest, and Persons Charged, by Geographic Divisions, 1947

A police department may compare its experience with that of other cities in the same geographic division by reference to tables 24 and 25. These figures are based on the reports of the 1,639 cities represented in tables 17 and 18 where the information was arranged by population groups.

As in any other comparisons of crime data between police departments, other information must be taken into consideration. The police are confronted with practical problems which affect the charge placed against an individual in certain instances in a given community. For example, persons arrested for manslaughter by negligence involving a traffic death may be charged with reckless or drunken driving or some other lesser violation. It may be that experience has shown that public opinion in the community as reflected in the attitude of other officials and juries will not support convictions for manslaughter in such instances.

Established local custom also is reflected in other classifications. The figures for prostitution and commercialized vice may be considered conservative since violators of such laws may be charged with some other sex offense, vagrancy, or disorderly conduct. Further, persons arrested for intoxication may be charged with disorderly conduct, while felonious assaults may be followed by a misdemeanor charge.

DATA COMPILED FROM FINGERPRINT RECORDS

Source of Data

During the first 6 months of 1948 the FBI examined 377,933 arrest records, as evidenced by fingerprint cards, in order to obtain data concerning the age, sex, race, and previous criminal history of the persons represented. The compilation has been limited to instances of arrests for violations of State laws and municipal ordinances. In other words, fingerprint cards representing arrests for violations of Federal laws or representing commitments to any type of penal institutions have been excluded from this tabulation.

The number of fingerprint records examined exceeded the 371,228 prints handled during the first 6 months of 1947 by 1.8 percent. The tabulation of data from fingerprint cards obviously does not include all persons arrested, since there are individuals taken into custody for whom no fingerprint cards are forwarded to Washington. Furthermore, data pertaining to persons arrested should not be treated as information regarding the number of offenses committed, since two or more persons may be involved in the joint commission of a single offense, and on the other hand one person may be arrested and charged with the commission of several separate crimes.

Offense Charged

More than 41 percent (157,361) of the records examined during the first half of 1948 represented arrests for major violations. Persons charged with murder, robbery, assault, burglary, larceny, and auto theft numbered 107,537 and constituted 28.5 percent of the total arrest records examined.

Sex

Fingerprint cards representing arrests of males during the first half of 1948 numbered 340,130, a 2.0 percent increase over the 333,403 cards received during the first half of 1947.

Female arrest prints decreased from 37,825 the first half of 1947 to 37,803 during the first half of 1948, representing a decrease of only 0.1 percent.

Age

During the first half of 1948, males and females under 21 years of age arrested and fingerprinted numbered 60,862, constituting 16.1 percent of the total arrests. In addition, there were 63,430 (16.8 percent) between the ages of 21 and 24, making a total of 124,292

(32.9 percent) less than 25 years old. Arrests of persons 25 to 29 years old numbered 61,175 (16.2 percent). The resultant total is 185,467 (49.1 percent) less than 30 years of age. It should be remembered that the number of arrest records is doubtless incomplete in the lower age groups because of the practice of some jurisdictions not to fingerprint youthful offenders.

Youths played a predominant part in the commission of crimes against property as indicated by the following figures: During the first half of 1948 there were 93,073 persons of all ages arrested for robbery, burglary, larceny, auto theft, embezzlement, fraud, forgery, counterfeiting, receiving stolen property, and arson; and 26,861 (28.9 percent) of those persons were less than 21 years old.

The extent of the participation of youths in the commission of crimes against property is further indicated by the following figures: During the first half of 1948, 32.9 percent of all persons arrested were less than 25 years of age; however, persons less than 25 years old numbered 55.5 percent of those charged with robbery, 59.9 percent of those charged with burglary, 45.2 percent of those charged with larceny, and 71.6 percent of those charged with auto theft. Approximately one-half of all crimes against property during the first half of 1948 were committed by persons under 25 years of age.

For males and females combined, the figures for the groups in which the largest number of arrests occurred during the first half of 1948 are as follows:

Age	Number of arrests	Age	Number of arrests
21	16, 702 16, 427 15, 871	19	15, 283 15, 159

The frequency of male arrests followed the same pattern as above, while arrests for females showed the largest number occurring at age 22 followed by ages 23, 21, 24, and 25 in that order.

Criminal Repeaters

Of the 377,933 arrest records examined, 218,448 (57.8 percent) represented persons who already had fingerprint cards on file in the Identification Division of the FBI. For males the percentage having prior records was 59.3 and for females the percentage was 44.3 These figures pertain to fingerprint arrest records and in no way relate to the Civil Identification Files of the FBI.

For males and females combined, the percentage with a prior fingerprint record was 20.0 at age 15 and this figure rose rapidly to 43.9 at age 20. For males, the percentage was 20.5 at age 15 and 44.6 at age 20. For females, the percentage with prior fingerprint records was 15.5 at age 15 and 38.0 at age 20.

Race

Most of the persons represented in this study were members of the white and Negro races. Members of the white race represented 279,054 of the 377,933 arrest records received, while 93,876 were Negroes, 3,228 were Indians, 275 Chinese, 160 Japanese and 1,340 were representatives of other races.

OFFENSE CLASSIFICATIONS

In order to indicate more clearly the types of offenses included in part I and part II offenses, there follows a brief definition of each classification:

Part I Offenses

- 1. Criminal homicide.—(a) Murder and nonnegligent manslaughter includes all wilful felonious homicides as distinguished from deaths caused by negligence. Does not include attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides excluded from this classification are limited to the following types of cases: (1) The killing of a felon by a peace officer in line of duty; (2) the killing of a hold-up man by a private citizen. (b) Manslaughter by negligence includes any death which the police investigation establishes was primarily attributable to gross negligence on the part of some individual other than the victim.
- 2. Rape.—Includes forcible rape, statutory rape (no force used—victim under age of consent), assault to rape, and attempted rape.
- 3. Robbery.—Includes stealing or taking anything of value from the person by force or violence or by putting in fear, such as strong-arm robbery, stick-ups, robbery armed. Includes assault to rob and attempt to rob.
- 4. Aggravated assault.—Includes assault with intent to kill; assault by shooting, cutting, stabbing, maining, poisoning, scalding, or by the use of acids. Does not include simple assault, assault and battery, fighting, etc.
- 5. Burglary—breaking or entering.—Includes burglary, housebreaking, safe-cracking, or any unlawful entry to commit a felony or a theft, even though no force was used to gain entrance. Includes attempts. Burglary followed by larceny is included in this classification and not counted again as larceny.
- 6. Larceny—theft (except auto theft).—(a) Fifty dollars and over in value; (b) under \$50 in value—includes in one of the above subclassifications, depending upon the value of the property stolen, thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Does not include embezzlement, "con" games, forgery, worthless checks, etc.
- 7. Auto theft.—Includes all cases where a motor vehicle is stolen or driven away and abandoned, including the so-called joy-riding thefts. Does not include taking for temporary use when actually returned by the taker, or unauthorized use by those having lawful access to the vehicle.

Part II Offenses

- 8. Other assaults.—Includes all assaults and attempted assaults which are not of an aggravated nature and which do not belong in class 4.
- 9. Forgery and counterfeiting.—Includes offenses dealing with the making, altering, uttering, or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.
- 10. Embezzlement and fraud.—Includes all offenses of fraudulent conversion, embezzlement, and obtaining money or property by false pretenses.
- 11. Stolen property; buying, receiving, possessing.—Includes buying, receiving, and possessing stolen property as well as attempts to commit any of those offenses.

- 12. Weapons; carrying, possessing, etc.—Includes all violations of regulations or statutes controlling the carrying, using, possessing, furnishing, and manufacturing of deadly weapons or silencers and all attempts to violate such statutes or regulations.
- 13. Prostitution and commercialized vice.—Includes sex offenses of a commercialized nature, or attempts to commit the same, such as prostitution, keeping bawdy house, procuring, transporting, or detaining women for immoral purposes.
- 14. Sex offenses (except rape and prostitution and commercialized vice).—Includes offenses against chastity, common decency, morals, and the like. Includes attempts.
- 15. Offenses against the family and children.—Includes offenses of nonsupport, neglect, desertion, or abuse of family and children.
- 16. Narcotic drug laws.—Includes offenses relating to narcotic drugs, such as unlawful possession, sale, or use. Excludes Federal offenses.
- 17. Liquor laws.—With the exception of "drunkenness" (class 18) and "driving while intoxicated" (class 22), liquor law violations, State or local, are placed in this class. Excludes Federal violations.
 - 18. Drunkenness.—Includes all offenses of drunkenness or intoxication.
- 19. Disorderly conduct.—Includes all charges of committing a breach of the peace.
 - 20. Vagrancy.—Includes such offenses as vagabondage, begging, loitering, etc.
- 21. Gambling.—Includes offenses of promoting, permitting, or engaging in gambling.
- 22. Driving while intoxicated.—Includes driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.
- 23. Violation of road and driving laws.—Includes violations of regulations with respect to the proper handling of a motor vehicle to prevent accidents.
 - 24. Parking violations.—Includes violations of parking ordinances.
- 25. Other violations of traffic and motor vehicle laws.—Includes violations of State laws and municipal ordinances with regard to traffic and motor vehicles not otherwise provided for in classes 22–24.
- 26. All other offenses.—Includes all violations of State or local laws for which no provision has been made above in classes 1–25.
- 27. Suspicion.—This classification includes all persons arrested as suspicious characters, but not in connection with any specific offense, who are released with out formal charges being placed against them.

UNIFORM CRIME REPORTS

J. Edgar Hoover, Director, Federal Bureau of Investigation, U. S. Department of Justice, Washington, D. C.

Volume XIX

January 1949

Number 2

SUMMARY

Estimated Number of Major Crimes

During 1948 a serious crime was committed every 18.7 seconds, on the average, and by the year's end the total reached an estimated 1,686,670 offenses. With the passing of each day on the average 36 persons were feloniously slain, 255 were victims of aggravated assault or rape and 150 robberies were committed. During an average 24-hour period 1,032 places were burglarized, 463 automobiles were stolen, in addition to 2,672 miscellaneous larcenies.

Crime Trends

Long-term crime trend data, based on cities with population in excess of 25,000, indicate that only negligent manslaughters and auto thefts have declined to points below the prewar average. Aggravated assaults and rapes in the larger communities reached peaks in 1948 of 68.7 and 49.9 percent, respectively, over the prewar averages and larceny, while declining during the war years, more recently has shown increases and for 1948 was 4.6 percent in excess of the prewar average. Other crimes, though showing some tendency to decline, still exceeded the prewar averages as follows: Burglary, 16.7 percent; murder, 14.1 percent; and robbery, 8.9 percent.

The total volume of crime throughout the country showed little change in 1948, increasing only 1.3 percent over the 1947 figures. The rise in the urban areas amounted to only 0.3 percent while the rural figures were up 4.3 percent. In the urban areas aggravated assaults increased 4.7 percent, larcenies 2.3 percent, and burglaries 0.8 percent, while in the rural areas aggravated assault showed a decrease of 0.6 percent but larceny increased 9.6 percent and burglary rose 5.1 percent.

Decreases in the city crime figures were as follows: Murder, 2.1 percent; negligent manslaughter, 7.7 percent; rape, 2.3 percent; robbery, 5.8 percent; and auto theft, 8.8 percent. In the rural areas in addition to the slight decrease in aggravated assault, other crimes declined as follows: Murder, 1.3 percent; negligent manslaughter, 1.1 percent; rape, 10.8 percent; robbery, 5.7 percent; and auto theft, 6.1 percent.

Monthly Variations in Crime

The crime figures reported monthly in 1948 show again the pronounced effect the seasons have on this social phenomenon. Crimes of murder, rape, and aggravated assault are most frequently committed during the summer months and least frequently during the cold winter season. Negligent manslaughter offenses, consisting almost entirely of traffic fatalities, show a trend inverse to that of other crimes against the person and were least frequent during the summer months and most frequent during the winter season, reaching a decided peak in December.

Robberies and burglaries were most frequent during the first quarter of the year and showed the smallest daily average during the third quarter. Larcenies were most frequent during the second quarter, reaching a peak in April and were least frequent during the first 3 months of the year with the lowest daily average reported for January. Auto thefts were most frequent during the fourth quarter of the year, reaching a peak in October and showed the lowest daily average in January.

Supplemental Crime Data

Over half (57.4 percent) of the rape offenses reported in 1948 were forcible in nature and the others classed as statutory cases. Of the robberies reported, 65.2 percent were considered highway robberies; 25.7 percent involved places of business; 5.1 percent occurred in private residences; and 4 percent were other types.

Of the burglaries reported, 39.4 percent involved residences and two-thirds of these were committed during the night, while 89 percent of the nonresidence burglaries were committed after dark.

The loot stolen in the average robbery amounted to \$202; in the average burglary, \$127; in the average larceny, \$64; and the average automobile stolen was valued at \$869.

Ninety-three percent of stolen automobiles and 21 percent of other types of stolen property were recovered by the police.

Persons Arrested

During 1948 fingerprint arrest records received at the FBI totaled 759,698, an increase of 3.5 percent over the previous all-time high of 1947. Approximately one-tenth of the arrest records received represented women and the predominating age of all persons arrested was 21, followed by ages 22, 23, 24, and 20 in that order. Fifty-eight percent of the arrest records received represented persons who already had fingerprint arrest records on file in Washington.

CLASSIFICATION OF OFFENSES

The term "offenses known to the police" is designed to include those crimes designated as part I classes of the uniform classification occurring within the police jurisdiction, whether they become known to the

police through reports of police officers, of citizens, of prosecuting or court officials, or otherwise. They are confined to the following group of seven classes of grave offenses, shown by experience to be those most generally and completely reported to the police: Criminal homicide, including (a) murder, nonnegligent manslaughter, and (b) manslaughter by negligence; rape; robbery; aggravated assault; burglary—breaking or entering; larceny—theft; and auto theft. The figures contained herein include also the number of attempted crimes of the designated classes. In other words, an attempted burglary or robbery, for example, is reported in the bulletin in the same manner as if the crime had been completed. Attempted murders, however, are reported as aggravated assaults.

"Offenses known to the police" include, therefore, all of the above offenses, including attempts, which are reported by the law-enforcement agencies of contributing communities and not merely arrests or cleared cases. Offenses committed by juveniles are included in the same manner as those known to have been committed by adults, regardless of the prosecutive action. Complaints which upon investigation are learned to be groundless are not included in the tabulations which follow.

In publishing the data sent in by chiefs of police in different cities, the F B I does not vouch for their accuracy. They are given out as current information which may throw some light on problems of crime and criminal-law enforcement.

In compiling the tables, returns which were apparently incomplete or otherwise defective were excluded.

In the last section of this bulletin may be found brief definitions of part I and II offense classifications.

EXTENT OF REPORTING AREA

In the table which follows there is shown the number of police departments from which one or more crime reports were received during the calendar year 1948. Information is presented for the cities divided according to size, and the population figures employed are from the 1940 decennial census.

Population group	Total number of cities	Cities retu	filing	Total popu-	Population r in retu	
	or towns	Number	Percent	lation	Number	Percent
Total	1, 079	1, 037	96. 1	62, 737, 577	62, 157, 314	99. 1
1. Cities over 250,000 2. Cities 100,000 to 250,000 3. Cities 50,000 to 100,000 4. Cities 25,000 to 50,000 5. Cities 10,000 to 25,000	37 55 107 213 667	37 55 107 213 625	100. 0 100. 0 100. 0 100. 0 93. 7	30, 195, 339 7, 792, 650 7, 343, 917 7, 417, 093 9, 988, 578	30, 195, 339 7, 792, 650 7, 343, 917 7, 417, 093 9, 408, 315	100. 0 100. 0 100. 0 100. 0 94. 2

Note.—The above table does not include 2,069 cities, villages, and rural townships aggregating a total population of 10,223,650. The cities and villages included in this figure are those of less than 10,000 population filing returns, whereas the rural townships are of varying population groups.

In addition to the 3,106 city and village police departments which forwarded crime reports during 1948, one or more reports were received during the year from 2,236 sheriffs and State police organizations and from 11 agencies in Territories and possessions of the United States, making a grand total of 5,353 agencies contributing crime reports to the F B I during 1948. The status of the reporting area by individual States is indicated in table 29.

¹ The Census Bureau's 1940 classification of communities as urban and rural has been followed. Generally, incorporated places with populations of 2,500 or more are classified as urban.
² Does not include 170 rural township and village police departments.

All counties were counted as contributors because the State police contribute data for rural portions of the

² Does not include 170 thrai township and village police departments.

³ Includes 144 counties for which State police submit crime reports and 15 counties composed entirely of urban communities whose police departments foward crime reports; sheriffs of these counties do not contribute reports.

Does not include 14 State police organizations contributing reports.

[§] State police also contribute.

MONTHLY REPORTS

Offenses Known to the Police—Cities Divided According to Population

As indicated in table 29, a total of 2,936 cities contributed crime reports to the F B I during 1948. However, not all of these cities sent in a complete set of reports for the year. The reports received were carefully examined and in some instances the verification of the returns indicated they were not properly prepared. Accordingly, any apparent discrepancies or any indication of misunderstanding as to the proper method to be followed in preparing the reports were made the subject of correspondence. In addition, frequent contacts were made with the contributing law enforcement agencies by Special Agents of the F B I to assist in correct uniform crime reporting. The tabulations which follow were based on the reports of those cities from whom a complete set of returns were received provided these returns appeared to have been prepared in accordance with Uniform Crime Reporting procedures.

Table 30 shows the number of offenses reported and the rate per 100,000 inhabitants by 2,404 cities representing a combined population in excess of 68 million. The data are divided with the cities grouped according to size so that interested individuals may compare local crime rates with averages for other cities of approximately the same size. This is generally desirable since there is a considerable variation in the crime rates for cities of different population groups.

The following figures show the percentage distribution of the crimes reported for 1948.

Offense	Rate per 100,000	Percent
Total	1, 687. 2	100. 0
Larceny Burglary Auto theft Assault Robbery Rape Murder Manslaughter	975, 2 392, 2 165, 5 75, 8 56, 2 12, 3 6, 0 4, 0	57. 8 23. 3 9. 8 4. 5 3. 3 . 7 4

¹ The number of offenses and rates for burglary and larceny—theft are based on reports as follows: Groups I–VI, 2,402 cities, total population, 58,756,345; group I, 34 cities, total population, 20,507,837.

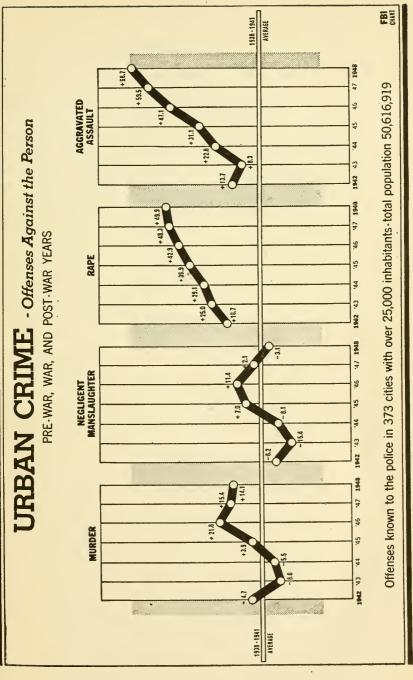

FIGURE 9.

Urban Crime Trends

Urban crime as a total during 1948 showed little change (+0.3 percent) over the figures for 1947 although moderate increases were registered for aggravated assault, 4.7 percent; burglary, 0.8 percent; and larceny, 2.3 percent.

Auto theft and negligent manslaughter declined 8.8 and 7.7 percent, respectively, while other decreases noted in the cities were as follows: Robbery, 5.8 percent; rape, 2.3 percent; and murder, 2.1 percent.

Most of the increases were reported by cities in the Northern region where all offenses except negligent manslaughter and auto theft exceeded the 1947 figures. In the South and West the only increases registered were moderate ones for aggravated assault.

Among the individual geographic divisions the East North Central and West North Central States showed the heaviest increases while generally the largest decreases were recorded in the Pacific area.

With the crime trend data grouped according to size of city, most of the increases were seen in the larger communities. For cities with less than 50,000 inhabitants only larceny showed increases, while cities over 250,000 in population registered increases in each offense class except manslaughter by negligence, robbery, and auto theft.

Auto thefts declined in each geographic division and in cities of each population group.

The foregoing comments are based on monthly crime reports received during 1947 and 1948 from 2,166 urban communities of all sizes throughout the country representing a combined population of 66,713,389 and the details are presented in tables 31 and 32.

Available long-term crime trend data are illustrated in figures 9 and 10. These charts are based on the reports of 373 cities with population in excess of 25,000—combined population, 50,616,919. The illustrations indicate the marked crime increases during and shortly after World War II.

Only negligent manslaughter and auto theft offenses have declined to points below the prewar average. Aggravated assaults and rapes in the larger communities reached peaks in 1948 of 68.7 and 49.9 percent, respectively, over the prewar averages for these offenses and larceny, while declining during the war years, more recently has shown increases and for 1948 was 4.6 percent in excess of the prewar average. Other crimes, though showing some tendency to decline, still exceeded the prewar averages as follows: Burglary, 16.7 percent; murder, 14.1 percent; and robbery, 8.9 percent.

Auto theft offenses have shown the most pronounced rise and fall of any of the crimes during recent years. These offenses in 1942 were 5.4 percent below the prewar average but thereafter rose sharply in 1945 to a point 35.5 percent in excess of the average for 1938-41, but have since fallen to a level 6.6 percent below the prewar average in 1948.

Monthly Variations—Offenses Known to the Police

Crime shows definite monthly variations and the patterns are rather well established over the years. Offenses of murder, rape, and aggravated assault are most frequently committed during the summer months and show the lowest daily average during the cold winter season. These crimes reached frequency peaks in June or July of 1948 and were least frequent during January.

Negligent manslaughter, while classed as a crime against the person, is quite different from other offenses in this general category in that these deaths are attributable to culpable negligence. Substantially all of them grow out of traffic fatalities and accordingly the seasonal fluctuation for negligent manslaughters shows the lowest frequency during the summer months and highest during the winter when driving conditions are less favorable. They reached a definite peak in frequency in December and the daily average was lowest in June and September.

Robbery and burglary were highest during the first quarter of the year and lowest in frequency during the third quarter. Robbery reached a peak in the number of offenses committed daily during December and the burglary peak was in February and March. The low months for these offenses were June for robbery and September for burglary.

Larceny offenses were most frequent during the second quarter, reaching a peak in April. They were least frequent during the first quarter with the smallest daily average being reported for January. Auto thefts were highest in frequency during the fourth quarter of the year, reaching a peak in October and showed the lowest daily average during January.

Offenses Known to the Police, Cities Divided According to Location

The volume of crime in a given location is affected by a large variety of factors, some of which are set forth on the page preceding table 37. The degree to which these factors influence the crime picture varies among the different areas of the country and accordingly marked variations in the crime rates among the several States and larger geographic divisions are observed.

The data presented heretofore in table 30 are shown in tables 35 and 36 with the rates per 100,000 presented for cities grouped according to location for the information of police administrators and others interested in studying the crime picture in a local community and making comparisons with average figures for other communities in

the same general location.

Caution should be exercised in making comparisons between the different sections of the country, bearing in mind that the tabulations in the interests of uniformity were based on the 1940 decennial census, whereas in some sections of the country marked changes in the population of individual communities have occurred. The figures in table 34 indicate the number of cities used in compiling the crime rate data.

Offenses in Individual Cities With More Than 25,000 Inhabitants

The number of offenses reported as having been committed during the period of January–December 1948 is shown in table 37. The compilation includes the reports received from police departments in cities with more than 25,000 inhabitants. Police administrators and other interested individuals will probably find it desirable to compare the crime rates of their cities with the average rates shown in tables 30, 35, and 36 of this publication. Similarly, they will doubtless desire to make comparisons with the figures for their communities for prior periods, in order to determine whether there has been an increase or a decrease in the amount of crime committed.

Caution should be exercised in comparing crime data for individual cities, because differences in the figures may be due to a variety of factors. The amount of crime committed in a community is not solely chargeable to the police but strather a charge against the entire community. The following is a list of some of the factors which might affect the amount of crime in a community:

Population of the city and metropolitan area adjacent thereto. The composition of the population with reference particularly to age, sex, and race.

The economic status and activities of the population. Climate.

Educational, recreational, and religious facilities.

The number of police employees per unit of population.

The standards governing appointments to the police force.

The policies of the prosecuting officials and the courts.

The attitude of the public toward law-enforcement problems.

The degree of efficiency of the local law-enforcement agency.

It should be remembered that the war brought about marked changes in some of the foregoing factors in many communities.

In comparing crime rates, it is generally more important to determine whether the figures for a given community show increases or decreases in the amount of crime committed than to ascertain whether the figures are above or below those of some other community.

Larcenies not separately reported. Figure listed includes both major and minor larcenies.
 Figures include offenses committed by juveniles: this is in accord with the uniform reporting procedure followed by other cities.

Supplement to Return A Data

Generally the Police Chief in a city over 25,000 in population is in need of something more than mere monthly totals as to the number of offenses of robbery, burglary, larceny, and the like, and the number of such offenses cleared by arrest. To most effectively cope with the crime problem, he should have available a more detailed analysis of the crime picture in his community.

Thus, most of the larger city departments are in a position to forward the F B I a supplement to the monthly Return A of offenses known to the police showing an analysis of reported offenses by nature of the criminal act, time and place of commission, and value of property stolen and value of property recovered. Summaries based on these reports follow in tables 38–40.

The 353 cities over 25,000 in population forwarding additional information relative to offenses known reported 5,731 crimes of rape and 57.4 percent of these were forcible offenses while 42.6 percent were classed as statutory in nature (no force used—victim under the age of consent). They reported 30,770 robberies, the majority of which (65.2 percent) were committed on sidewalks and other public thoroughfares. These were classed as highway robberies. In 25.7 percent of the robbery offenses a place of business was involved; in 5.1 percent of the cases the robberies occurred in private residences and 4.0 percent of the robberies were classed as miscellaneous in nature.

Of the 178,553 burglaries reported, 39.4 percent involved residences and 60.6 percent were committed in business establishments. Two-thirds of the residence burglaries were committed during the night, while 89 percent of the nonresidence offenses were committed after dark.

Twenty-five percent of the 418,596 larcenies involved property over \$50 in value; 61.3 percent were thefts of property valued from \$5 to \$50; and 13.7 percent of the thefts involved property valued at less than \$5. Nearly one-half of all the larcenies involved thefts of auto accessories or other personal property from automobiles and bieyele thefts.

The reporting cities showed car thefts totaling 75,094 during 1948 with recoveries of stolen cars during the same period of 69,917 or 93.1 percent.

Of the 353 cities with over 25,000 inhabitants mentioned above, 344 reported information as to the value of property stolen by individual offense classification and the summary data are presented in table 39. These cities reported 685,459 crimes against property with a total value of property stolen of \$119,240,431, for an average of \$174 per offense.

In 29,940 instances victims were personally accosted by thieves who robbed them of property valued at \$6,036,608 or \$202 on the average for each hold-up. Over 22 million dollars in property was taken in the 173,047 burglaries reported for an average value of property stolen of \$127 per offense.

While the average largery involved property of only \$64, such crimes are of great frequency; thus the loot taken in the reporting cities totaled nearly 26 million dollars in the 407,378 thefts reported The average automobile stolen was valued at \$869.

Table 39.—Value of property stolen, by type of crime, 1948

[Based on the reports of 344 cities over 25,000 in population; total population, 39,571,703, according to 1940 decennial census. All values have been rounded off to even dollars]

In 337 instances the cities over 25,000 in population reported complete data relative to the value of property stolen and recovered by type of property as indicated in table 40. The loot taken by thieves in the reporting cities during 1948 totaled \$112,093,594 and 59.9 percent or \$67,184,640 in stolen property was recovered by the police. Exclusive of automobiles, the recoveries amounted to 20.8 percent.

Table 40.—Value of property stolen and value of property recovered, by type of property, 1948

Rural Crime Rates

The 1948 murder and nonnegligent manslaughter crime rates for the rural areas exceed slightly the corresponding figures for the urban communities as a group, and the rates for rape in the two areas are substantially the same. For other offense classes, however, the rural rates are noticeably lower.

A comparison of the rural crime rates with those for cities with population under 10,000 reflects substantially higher rates in the rural areas for murder, manslaughter by negligence, and rape with the rates for aggravated assault and robbery reasonably comparable. The small city rates for burglary, larceny, and auto theft exceed those for the rural areas, but not to such a pronounced degree as is observed in the comparison between the rural rates and those for urban communities of all sizes.

The rural crime data presented in table 41 are based on the reports of 1,574 sheriffs, 132 rural village officers, and 11 State police organizations representing a combined rural population of 34,168,627. The rural figures include the reports of some agencies which listed a very small number of offenses and in some instances the entries on the reports for offenses known may have been limited to cases in which arrests were made. Thus some incompleteness probably exists in the rural reports, particularly in the less serious crime classes.

Table 41.—Offenses known, rural areas, number and rate per 100,000 inhabitants, 1948

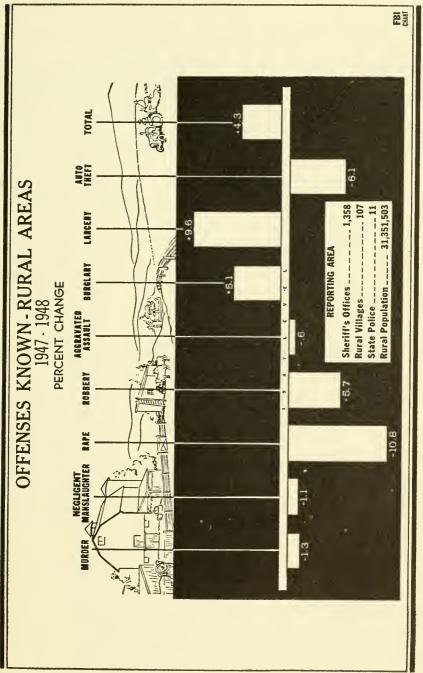

FIGURE 14.

Rural Crime Trends

Rural crime in 1948 was up 4.3 percent over the figures for 1947, as compared with a 0.3 percent increase in the cities.

The trends in the rural areas were generally in the same direction as those reported by the cities, although aggravated assault showed a slight decrease (0.6 percent) as compared with a 4.7 percent rise in the urban areas.

The rise in rural burglaries and larcenies of 5.1 and 9.6 percent was more pronounced than the 0.8 percent burglary increase and 2.3 percent larceny increase in the cities.

Rural murders and negligent homicides were down 1.3 and 1.1 percent, in that order, as compared with a 2.1 percent urban murder decrease and a 7.7 percent decrease in urban negligent manslaughter offenses. Offenses of rape in the rural areas declined 10.8 percent from the 1947 figures and robberies were down 5.7 percent, while urban crimes in these classes declined 2.3 and 5.8 percent, respectively.

A 6.1 percent decrease in auto thefts was reported in the rural areas while in urban communities these crimes were down 8.8 percent during 1948 as compared with the previous year.

Table 42.—Trends in offenses known, rural areas, 1947-48

Offenses Known in Territories and Possessions

During 1948 a complete set of monthly reports was received from nine Territories and possessions of the United States. Included in table 43 are the data reported from the First and Fourth Judicial Districts in Alaska; Honolulu City, and the counties of Hawaii, Honolulu, Kauai, and Maui in the Territory of Hawaii; the Isthmus of Panama; and Puerto Rico. The figures represent offenses reported to the police agencies serving both the urban and rural areas with the exception that the figures for Honolulu City and Honolulu County are reported separately.

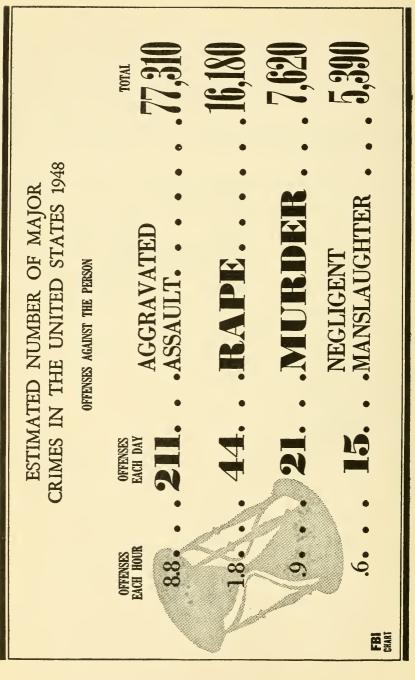

FIGURE 15.

Estimated Number of Major Crimes, 1948

A serious crime was committed every 18.7 seconds during 1948 and by the year's end the estimated total reached 1,686,670 offenses.

On the average each day 36 persons were feloniously slain, 255 were victims of aggravated assault or rape, and 150 robberies were committed. Places burglarized numbered 1,032; 463 automobiles were stolen; and 2,672 larcenies of miscellaneous types were committed.

The estimates with reference to total crime in the United States during 1948 as presented in table 44 are based on crime reports received each month during the year from over 4,100 local law-enforcement agencies policing a population in excess of 102,000,000 including both urban and rural areas. While the larceny figures include minor thefts, a number of serious crimes such as embezzlement, fraud, arson, and the like are not included in the tabulation. Thus the estimated total of serious crimes is considered conservative.

DATA COMPILED FROM FINGERPRINT RECORDS

Source of Data

A total of 759,698 fingerprint arrest records were received at the F B I during 1948. This figure exceeded the 1947 total of 734,041 by 3.5 percent and, in fact, was the largest of any yearly total since the tabulation of fingerprint arrest records first began in 1932. The fingerprint arrest records as received are examined to record data concerning the age, sex, race, and previous criminal history of the persons arrested and the tabulations which follow are based on this study.

In recording the data, duplications (two fingerprint cards representing the same arrest) are eliminated as are the fingerprint cards representing commitments to any type of penal institution. Also, the compilation is limited to arrests for violations of State laws and municipal ordinances, Federal charges being excluded.

The data compiled from fingerprint cards by no means represents all persons arrested since there are many persons taken into custody for whom no fingerprints are forwarded to Washington. In addition, data pertaining to persons arrested should not be treated as information relative to the volume of crime since many offenses are committed in connection with which no arrests are made. Then, too, one person may be arrested for the commission of several separate crimes while in another instance two or more arrested persons may be involved in the joint commission of a single offense.

Offense Charged

Of the total fingerprint arrest records received in 1948, more than 41 percent (312,264) represented arrests for major violations. Those charged with murder, robbery, assault, burglary, larceny, and auto theft numbered 212,823 or 28.0 percent of the total.

Sex

Approximately one-tenth (76,977) of the fingerprint arrest records received during 1948 represented arrests of women while the remaining 682,721 were males. Female arrest fingerprints increased 2.1 percent over the figures for 1947 while male arrests showed a 3.7 percent rise.

Age

During 1948, males and females under 21 years of age arrested and fingerprinted numbered 115,940, constituting 15.3 percent of the total arrests. In addition, there were 125,362 (16.5 percent) between the ages of 21 and 24, making a total of 241,302 (31.8 percent) less than 25 years old. Arrests of persons 25 to 29 years old numbered 123,468 (16.2 percent). The resultant total is 364,770 (48.0 percent) less than 30 years of age. It should be remembered that the number of arrest records is doubtless incomplete in the lower age groups because of the practice of some jurisdictions not to fingerprint youthful offenders.

Youths played a predominant part in the commission of crimes against property as indicated by the following figures: During 1948 there were 181,652 persons of all ages arrested for robbery, burglary, larceny, auto theft, embezzlement, fraud, forgery, counterfeiting, receiving stolen property, and arson; and 50,723 (27.9 percent) of those persons were less than 21 years old.

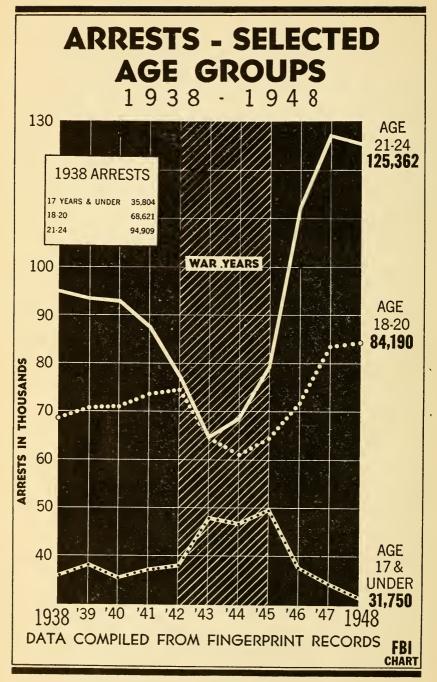

FIGURE 18.

The extent of the participation of youths in the commission of crimes against property is further indicated by the following figures: During 1948, 31.8 percent of all persons arrested were less than 25 years of age. However, persons less than 25 years old numbered 54.7 percent of those charged with robbery, 58.9 percent of those charged with burglary, 44.6 percent of those charged with larceny, and 69.6 percent of those charged with auto theft. Approximately one-half of all crimes against property during 1948 were committed by persons under 25 years of age.

Age 21 predominated during 1948 among the single age groups followed by ages 22, 23, 24, and 20, in that order.

Criminal Repeaters

A search of the 759,698 fingerprint arrest records received during 1948 against the fingerprint arrest records on file in the Identification Division of the F B I disclosed that 58.0 percent of the arrest records received during the year represented persons who already had fingerprint arrest cards on file in Washington. The percentage was higher for males (59.5) than for females (44.7). These figures pertain to fingerprint arrest records and in no way relate to civil identification files at the F B I.

Table 48.—Percentage with previous fingerprint records, arrests, 1948

Only 87 fingerprint cards received representing arrests for violation of parking regulations.

Race

Most of the persons represented in this study were members of the white and Negro races. Members of the white race represented 557,125 of the 759,698 arrest records received, while 191,921 were Negroes, 6,846 were Indians, 653 Chinese, 309 Japanese, and 2,844 were representatives of other races.

OFFENSE CLASSIFICATIONS

In order to indicate more clearly the types of offenses included in part I and part II offenses, there follows a brief definition of each classification:

Part I Offenses

- 1. Criminal homicide.—(a) Murder and nonnegligent manslaughter includes all willful felonious homicides as distinguished from deaths caused by negligence. Does not include attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides excluded from this classification are limited to the following types of cases: (1) The killing of a felon by a peace officer in line of duty; (2) The killing of a hold-up man by a private citizen. (b) Manslaughter by negligence includes any death which the police investigation establishes was primarily attributable to gross negligence on the part of some individual other than the victim.
- 2. Rape.—Includes forcible rape, statutory rape (no force used—victim under age of consent), assault to rape, and attempted rape.
- 3. Robbery.—Includes stealing or taking anything of value from the person by force or violence or by putting in fear, such as strong-arm robbery, stick-ups, robbery armed. Includes assault to rob and attempt to rob.
- 4. Aggravated assault.—Includes assault with intent to kill; assault by shooting, cutting, stabbing, maining, poisoning, scalding, or by the use of acids. Does not include simple assault, assault and battery, fighting, etc.
- 5. Burglary—breaking or entering.—Includes burglary, housebreaking, safe-cracking, or any unlawful entry to commit a felony or a theft, even though no force was used to gain entrance. Includes attempts. Burglary followed by larceny is included in this classification and not counted again as larceny.
- 6. Larceny—theft (except auto theft).—(a) Fifty dollars and over in value; (b) under \$50 in value—includes in one of the above subclassifications, depending upon the value of the property stolen, thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Does not include embezzlement, "con" games, forgery, worthless checks, etc.
- 7. Auto theft.—Includes all cases where a motor vehicle is stolen or driven away and abandoned, including the so-called joy-riding thefts. Does not include taking for temporary use when actually returned by the taker, or unauthorized use by those having lawful access to the vehicle.

Part II Offenses

- 8. Other assaults.—Includes all assaults and attempted assaults which are not of an aggravated nature and which do not belong in class 4.
- 9. Forgery and counterfeiting.—Includes offenses dealing with the making, altering, uttering, or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.
- 10. Embezzlement and fraud.—Includes all offenses of fraudulent conversion, embezzlement, and obtaining money or property by false pretenses.
- 11. Stolen property; buying, receiving, possessing.—Includes buying, receiving, and possessing stolen property as well as attempts to commit any of those offenses.

- 12. Weapons; carrying, possessing, etc.—Includes all violations of regulations or statutes controlling the carrying, using, possessing, furnishing, and manufacturing of deadly weapons or silencers and all attempts to violate such statutes or regulations.
- 13. Prostitution and commercialized vice.—Includes sex offenses of a commercialized nature, or attempts to commit the same, such as prostitution, keeping bawdy house, procuring, transporting, or detaining women for immoral purposes.
- 14. Sex offenses (except rape and prostitution and commercialized vice).—Includes offenses against chastity, common decency, morals, and the like. Includes attempts.
- 15. Offenses against the family and children.—Includes offenses of nonsupport, neglect, desertion, or abuse of family and children.
- 16. Narcotic drug laws.—Includes offenses relating to narcotic drugs, such as unlawful possession, sale, or use. Excludes Federal offenses.
- 17. Liquor laws.—With the exception of "drunkenness" (class 18) and "driving while intoxicated" (class 22), liquor law violations, State or local, are placed in this class. Excludes Federal violations.
 - 18. Drunkenness.—Includes all offenses of drunkenness or intoxication.
- 19. Disorderly conduct.—Includes all charges of committing a breach of the peace.
 - 20. Vagrancy.—Includes such offenses as vagabondage, begging, loitering, etc.
- 21. Gambling.—Includes offenses of promoting, permitting, or engaging in gambling.
- 22. Driving while intoxicated.—Includes driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.
- 23. Violation of road and driving laws.—Includes violations of regulations with respect to the proper handling of a motor vehicle to prevent accidents.
 - 24. Parking violations.—Includes violations of parking ordinances.
- 25. Other violations of traffic and motor vehicle laws.—Includes violations of State laws and municipal ordinances with regard to traffic and motor vehicles not otherwise provided for in classes 22–24.
- 26. All other offenses.—Includes all violations of State or local laws for which no provision has been made above in classes 1–25.
- 27. Suspicion.—This classification includes all persons arrested as suspicious characters, but not in connection with any specific offense, who are released without formal charges being placed against them.
